

Phase 3: Enhancing Safety and Expanding Access for All Patients

We're embarking on the largest phase yet in our multi-year Cause for the Community campaign. Phase 3 will focus on enhancing safety and expanding access for the 300,000 residents in our seven-county service area.

Your support will help place Ridgeview on the forefront of modern health care. Here's how:

Critical Access Hospitals

The team at the **Ridgeview Le Sueur Campus** understands how health care screenings and diagnostics can improve community wellness. Your generosity will allow us to bring back endoscopy for screenings and diagnostics, enhance preventive cancer screenings and expand rehab therapy services.

The results of the community's philanthropy is apparent at the **Ridgeview Arlington Campus**, with the addition of the chemo/infusion treatment area, campus-wide updates and more. Now, your donations will help us upgrade aging infrastructure, add mammography equipment and invest in technologically advanced stretchers in the Emergency Department.

Women & Children's Services

Birth Center and NICU

Look around and you can see how fast our community is growing, with an influx of younger families who expect access to the very best health care. Ridgeview must be ready, which is why we're raising funds to replace aging equipment in our Birth Center and Neonatal Intensive Care Unit (NICU), and to support more staff education to ensure our teams are trained and ready for any medical situation.

Pediatrics

Your donations will allow us to advance the training and education of staff so we can care for more children close to home. With this, we'll introduce a newborn hospital rounding model and expand additional pediatric services, including a limited stay unit where children with specific diagnoses can be treated at Ridgeview – eliminating the need to transfer them to metro-area hospitals. Funds are also needed to provide pediatric-specific equipment and technology, including stethoscopes and nebulizers, to support the unique developmental needs of our pediatric patients.

Let's do **more**, together.

Learn how you can make a difference.

Foundation

Surgery

Your generosity will support a variety of surgical initiatives, including replacing aging operating room tables. Additional philanthropy is needed to update our existing ear, nose and throat (ENT) navigation system and advance the technology of our complex spine surgery platform.

Pharmacy

An automated medication dispensing system is a critical piece of technology that ensures safe and efficient dispensing of medicine from 40 cabinets throughout Ridgeview's four hospitals. The benefits of these systems include increased access to medications, medication safety, diversion prevention, narcotics security and clinical staff convenience. Our current automated medication dispensing systems are aging and must be replaced with new technology.

Mental Health Services

Continued support of our Mental Health Services will advance our vision of providing a specialized crisis management and telepsychiatry consultation (Emergency Department); inpatient consultation; a hospital-based clinic; partial hospitalization; an addiction intensive outpatient program; and a chemical dependency program, all key components to a comprehensive Mental Health Program.
